

ELECTRICAL TESTING

Low- & High voltage, DUT control & signal logging

OVERVIEW OF OUR SERVICES

Thermal Management System Design

for electronic cooling systems, electric drives, battery systems, etc.

Thermal Management Applications

for climate control systems, battery cooling systems, electric drives, and electronic cooling systems, etc.

Test Design & Validation

for individual components and complete systems

Component Testing

e.g. endurance testing to verify thermal and climatic resilience

Altitude Simulation

ambient pressure from 4.4 to 170 kPa, decompression rates up to 4 kPa/s

High /Low Temperature & Temperature Cycle

Temperature storage, temperature cycling & thermal shock testing from -70 °C to +240 °C

CONTACT

Head of Thermal Management
